\* ↑, ↓, and → indicate an increase, a decrease, and the same level, respectively, compared to the previous week.

\* The positive rate is calculated mechanically with the number of new positive tests (including patients with pseudo-symptoms) based on the publication date in each prefecture as the numerator, and the number of PCR tests (including tests at discharge) as the denominator. The results may exceed 100% due to the influence of delay in reporting the number of PCR tests, and attention should be paid to the interpretation of the results in other prefectures as well.

\* “Trends in the numbers of inpatients” are based on the “Surveillance of the Status of Care for Patients with the Novel Coronavirus Infection and the Number of Beds,” by the Ministry of Health, Labour and Welfare. In this surveillance, the results as of 0:00 on the presentation date are published.

↑, ↓, and → indicate an increase, a decrease, and the same level, respectively, compared to the previous week.
